**DETAILED ACTION*****Election/Restrictions***

Applicant's election with traverse of Invention I, claims 1-28 and Species I, Figures 1-2B, in the reply filed on March 29, 2005 is acknowledged. The traversal is on the ground(s) that under M.P.E.P. § 803, the entire application must be examined as a whole when there would not be a serious burden on the examiner if restriction were not required. This is not found persuasive because, "a serious burden on the examiner may be *prima facie* shown if the examiner shows by appropriate explanation of separate classification or separate status in the art or a different field of search as defined in M.P.E.P. § 808.02."

It is further acknowledged that applicant believes that claims 1-6, 8-13, 17-20, 23 and 25-27 read on the elected Species I, Figures 1-2B. The examiner agrees with the applicant regarding all claims except claims 18 and 25. The elected Species, Figures 1-2B, does not have "at least one of the openings in the plurality of segments disposed at a non-perpendicular angle with respect to the longitudinal axis" or "the distal portion formed at an angle with respect to the longitudinal axis of up to approximately 10 degree" as required by claims 18 and 25, respectively.

Claims 7, 14-16, 18, 21-22, 24-25 and 28-30 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected species, there being no allowable generic or linking claim. Applicant timely traversed the restriction/election requirement in the reply filed on March 29, 2005. The requirement is still deemed proper and is therefore made FINAL.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

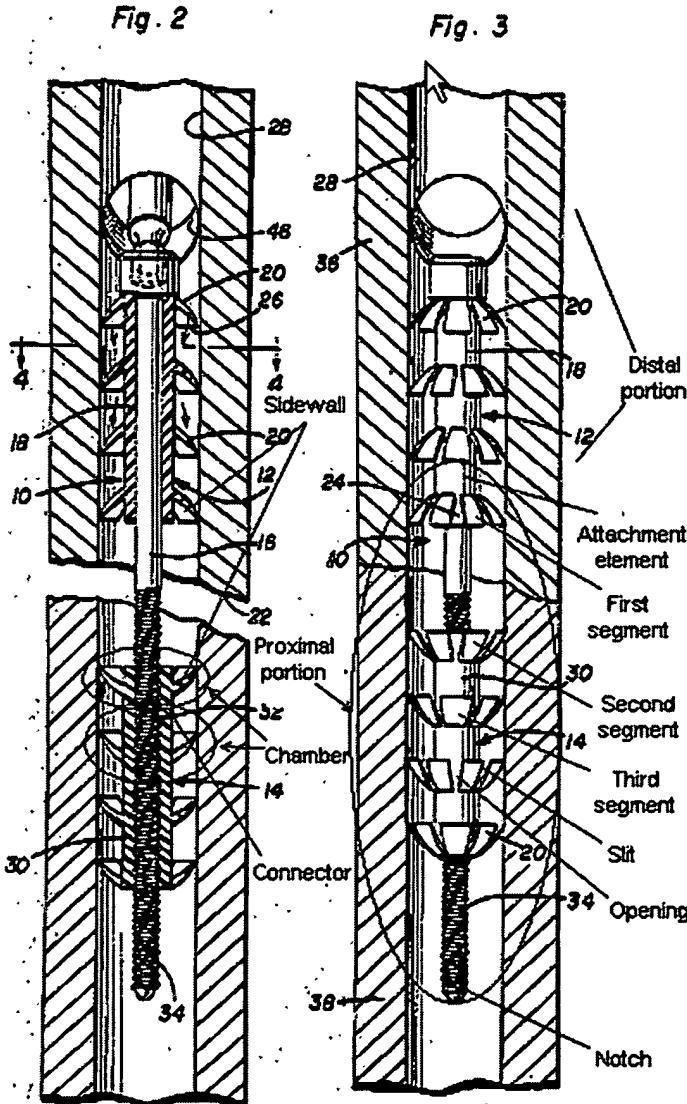

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4, 9-10, 12, 17, 19, 23 and 26 are rejected under 35 U.S.C. 102(b) as being anticipated by Roalstad et al. (U.S. Patent Number 4,262,665).

Roalstad et al. disclose a nail comprising a proximal portion and a distal portion defining a longitudinal axis (see Figure 3 below). The proximal portion comprises a plurality of segments with an opening along the longitudinal axis and a notch for receiving a tool (see Figure 3 below). In addition, at least one of the plurality of segments is rotatable with respect to the distal portion about the longitudinal axis, i.e. the plurality of segments can rotate along the threaded portion of the nail (see Figure 3 below). Furthermore, the first segment has an attachment element and is non-rotatably attached to the distal portion of the nail (see Figure 3 below).

The device further comprises a means for locking at least one rotatable segment, e.g. the plurality of segments along the threaded portion of the nail can be locked in place. The first segment and the second segment comprise a sidewall defining a chamber (see Figure 2 below). The second and third

segments comprise a connector (see Figure 2 below). The sidewalls comprise slits, and the openings are substantially oval shaped (see Figure 3 below).

#### ***Allowable Subject Matter***

Claims 5-6, 8, 11, 13, 20 and 27 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

***Conclusion***

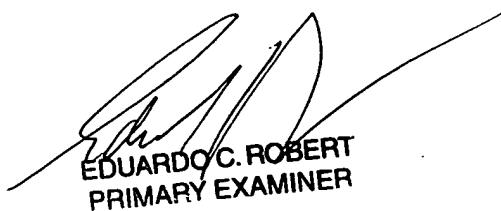

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See PTO 892 for art cited of interest.
